

All Ductings as shown in red to be installed with minimum 200mm radius bends, accessible at both ends and be supplied complete with drawcards

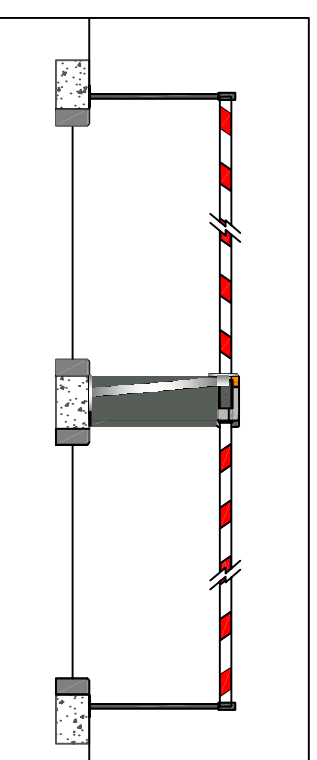

All foundations to be level relative to the main traffic island

Traffic island finish to be concrete

This layout plan should be used in conjunction with the Rapid foundation drawing for details of duct entry point to the barriers and induction loop duct location etc.

It is recommended that protective bollards are installed at either end of the traffic island to - the overall length of the island will need to be increased to accommodate these if required
